REPORT  
OF THE  
DEPARTMENT OF PARKS.

---

DEPARTMENT OF PARKS, }  
Room 12, City Hall, }  
BROOKLYN, January, 1891. }

*To the Honorable the Common Council:*

GENTLEMEN :

In compliance with the terms of the Charter, the Commissioners of the Department of Parks hereby furnish your Honorable Body with a full report of their proceedings for the year 1890, embracing a detailed statement of their receipts and expenditures for that time.

The Commissioners of the Department of Parks would respectfully report that the Board of Estimate appropriated for the year 1890 \$399,810 for Public Parks and Parkways, and \$10,000 for Coney Island Concourse and Parade Ground. These amounts, together with \$120,294.05 for balances over from 1888 and 1889, made the amount available for Park purposes for 1890 \$530,104.05. Of this amount there have been expended during the year 1890, \$389,085.26, leaving a balance of \$141,018.79. Against a portion of this there are contracts outstanding.

As to the amounts set aside for special purposes by Chapter 384 of the Laws of 1888, the Commissioners would state that of the balance of \$166,322 remaining at the beginning of the year, from the \$300,000 set aside for the purchase of Small Parks, \$105,308.21 have been expended for Bushwick Park, leaving \$61,013.79. This amount has been increased \$110 by the sale of old building in Winthrop Park, making a balance of \$61,123.79 to the credit of this account.

Of the balance of \$117,352.20 remaining at the beginning of the year from the \$200,000 set aside for permanent improvements in and about Prospect Park, \$88,823.15 have been expended; \$43,953.75 of this amount have been used to complete payments on Park Entrances, Lullwater Bridge and Sentry Boxes, and \$32,696.01 on account of Breeze Hill Bridge, leaving a balance of \$28,529.05 to the credit of this account. Contracts are outstanding on Breeze Hill Bridge, and other work is being done, which will absorb this amount.

The main improvements completed in Prospect Park in 1890 by the Commission consists of New Watermain in Prospect Park; building for new Workshops; altering and improving Flower Garden Shelter and providing restaurant accommodations; Sheds for horses and carriages at the Flower Garden Shelter; new Nursery; Propagating and Green Houses; steel and iron Bridge over the Lullwater; stone and iron Bridge near Breeze Hill (nearly completed); completion of Willink and Boulevard Entrances, and the laying out and construction of a new walk from Willink Entrance to the Flower Garden Shelter; 81,061 square feet of new walk, and 107,814 square feet of old walks repaired.

Outside of Prospect Park the following improvements have been made, viz.: A stone and iron fence has been built, and a concrete sidewalk laid around Tompkins Park.

A new music stand has been erected, the Shelter House enlarged and improved, and 40,516 square feet of walk relaid in Washington Park. Winthrop Park has been partially graded and laid out, preparatory to planting and sodding in the spring.

The main Shelter House at the Coney Island Concourse, which was damaged by the severe storm of last season, has been raised on iron piles and altered, and has thus far withstood all the storms of the season.

There have been received during the year, for rental of Park privileges, sale of wool, old carpet, etc., \$5,541.20. This amount has been paid into the City Treasurer and credited to "Revenue Fund."

In the last report to your Honorable Body, it was noted that of the sale of the East Side Lands, made in 1888, 57 lots were unsettled for. During the year 1890, 24 of these have been taken by the purchasers or their assignees, and \$19,661.96 were received in cash and bond and mortgage. The cash was deposited in the Franklin Trust Company, and the mortgage deposited in the Comptroller's office. This still leaves 33 lots of the sale of 1888, on which 10 per cent. has been paid, yet unsettled for.

Below please find a synopsis furnished by the Superintendent of Parks of the work done by this Department during the year 1890.

#### MAINTENANCE.

The regular maintenance of the Parks and Boulevards consists in caring for drives, walks, bridle-roads, lawns, shrubs, trees, flower-beds, drainage and general repairs of buildings, fences, etc.

#### PRUNING AND CULTIVATION OF TREES, SHRUBS, ETC.

The report of last year ended when the work of pruning

and cultivating the trees on Eastern Parkway and Ocean Parkway had only been commenced. That work was continued the whole lengths of said parkways, which greatly improved their condition and symmetrical appearance. As a beneficial result of this treatment, they were less attacked by insects last summer than any previous summer since they had been planted.

Five hundred and sixty-four trees, consisting of American Elms, Norway, Sugar and Silver Maples, were planted, replacing dead trees of the same kind along said parkways.

#### PRUNING SHRUBS IN PROSPECT PARK AND CITY PARKS.

The shrubs in these Parks had been neglected for many years, so that a great number had lost their identity and had become small trees. A large majority had grown tall and ungainly, and many overgrown bushes were furnished with foliage on their tops only, and their bottom had become merely bare sticks.

To remedy the result of this neglect, a course of severe pruning was required and followed. It was thought by many at the time, even experienced gardeners, that the treatment pursued was too severe; but the result has fully justified the course adopted, and the improvement in symmetry and foliage of the new growth has been all that could be desired.

#### HYACINTHS AND TULIPS.

The planting of bulbs in early winter of 1889 in the Flower Garden and beds of small Parks proved quite a success as to the quality of the flowers and the general admiration of the designs.

#### SPRING AND SUMMER WORK.

The bare slope by the walk through the ravine south of

Farm House was planted with Indian Currants thinned out from Duck Island, which greatly improved the slope, at the same time retaining it from dribbling down to the sidewalk.

The new Nursery was planted with a good collection of shrubs, trees, maples, golden poplar, button ball, etc.

#### FLOWER GARDEN.

The Flower Garden was planted with new designs for the flower-beds, replacing the hyacinths and tulips, also planting palms in the mounds and in grass plots with French Cannas.

#### WATER LILLIES.

A variety of water lillies was put in the ponds, which in the first year only got established, and with due care and preparation it is to be hoped will prove a success next summer.

#### THE OLD FLOWER GARDEN,

by the Children's Playground, has been thoroughly renovated by the thinning out of overcrowded plants and shrubs, transplanting, cultivating, etc., together with the training of climbing plants on the reconstructed Long Arbor.

#### EARLY WINTER WORK.

Hyacinth and tulip bulbs have been planted in the Flower Garden and in Washington, City and Tompkins Parks, and well covered for protection. Also crocus and narcissus on grass and wooded slopes along the drives and Flower Garden.

## DRIVES AND WALKS, PROSPECT PARK.

The East Drive has been graded and laid with double-screened Roa Hook Gravel continued from last year's work from the junction of Central Drive to Gate 3 below the Horse Fountain Concourse. The South Drive was also graded and gravelled from 15th Street and 9th Avenue down to the South Lake. The remainder of the drives were repaired with gutters relaid and basins rebuilt.

A new walk was constructed from Willink Entrance to the Flower Garden, and laid with tar chemical composition. Also from Gate 5 and Central Drive on south side to 9th Avenue, and along 9th Avenue from 15th Street to 9th Street. Also from Picnic House across the meadow to meet walks from Farm House and Three-arch Bridge. Another new walk was constructed across the meadow from the drive at 9th Street to the Trout Pond, and a branch constructed to connect with walk from Trout Pond to the Nethermead. Drains and basins were made to all these walks, connecting with the Park drainage, and all laid with chemical tar and gravel pavement.

The old deteriorated tar walks from the Trout Pond by the Quakers' Cemetery and around south end of the meadow returning to Seventh Street, were regraded and resurfaced with chemical tar and gravel pavement. The sides of new walks opposite Flower Garden have been planted with shrubbery.

The following old walks were also laid with tar chemical and gravel composition: All around the Nethermead from near the Three-arch Bridge to the walk near the Lullwater Bridge; also walk from Flower Garden to Boat House, and drive from Boat House to Bridle-road; and also walk around Willink Entrance Shelter and new wall to junction of street cars at Flatbush.

## OCEAN PARKWAY.

About six thousand cubic yards of mud and filth having been hauled away off the Ocean Parkway from the Plaza at Gate 4 to the tunnel below Parkville, the same quantity of screened gravel was placed on it the same length. There being no system of drainage along the Boulevard, at the crossings from Church Lane to the Tunnel the drive was always flooded after rain. To remedy this, six large cesspools, fifteen feet each in diameter and twelve feet or more in depth through the gravel have been made in different places, lined with dry stone walls and backed with small stone, with drains leading to the same from road basins, which have proved effectually to drain the water from the Boulevard. The basins being regularly cleaned out, the silt remains in their bottom, leaving the water more free of dirt for the cesspools.

Below the tunnel the Parkway has been kept in order with screened gravel from the Department gravel-pit.

## THE EASTERN SHELTER AT CONEY ISLAND,

having been badly damaged by the high tides in September, 1889, was raised higher than before and repaired with open railings instead of the former solid panel work, so as not to be subjected to the full force of the waves.

The Concourse and beach were kept clean during the summer, clearing away all debris brought by the tides, making the beach a desirable resort for visitors.

The railing of the bridge over Coney Island Creek having become rotten and unsafe, it is being replaced by a new railing, with other repairs to the bridge.

## EASTERN PARKWAY.

The whole length of the Eastern Parkway has been repaired, and a layer of Roa Hook Gravel, double-screened,

rolled and packed, placed thereon from Bedford Avenue to the Plaza.

About six thousand cubic yards of Roa Hook Gravel were used during the summer for Prospect Park drives, Eastern Parkway and chemical tar and gravel walks, independent of gravel brought from the gravel-pits of the Department.

#### WASHINGTON PARK (FORT GREENE).

The whole of the shrubbery at Washington Park had the same treatment in pruning as Prospect Park, together with the trees and the care of the lawns. The disintegrated tar walks of the Park were resurfaced with Trinidad asphalt. The cottage was also altered, with the water service improved, and all of the rooms heated with hot air from a J. L. Mott 'Comet' 36 inch furnace. A new music stand was also erected.

#### TOMPKINS PARK.

Tompkins Park lawns and flower-beds had the usual care, and the shrubbery was pruned and inside wire fences put in proper order. A new iron railing has been put all around the Park on a stone base and concrete foundation. The whole of the sidewalks have been laid with kosmo-concrete pavement, and the Park walks extended out to the sidewalks. The extension to the Park inside to be planted with shrubs.

#### WINTHROP PARK.

The work of developing this Park has been in progress during the year, in accordance with designs adopted for its improvement by the Department.

The entire area has been worked over, and it is intended

that a considerable portion of it will be in a condition to finish in the spring.

A large amount of filling was required in order to properly grade and regulate the interior portions of this Park, and for this purpose nearly 43,000 cubic yards of material were purchased during the year, and of which 18,000 cubic yards was soil suitable for trees, shrubs and turf.

Nearly 3,000 feet of walks have been outlined, and a part of these have been prepared for finishing during the ensuing season.

#### BUSHWICK PARK.

The title to this property passed into the keeping of this Department at the close of the year. The engineer of the Department has been instructed to prepare a design suitable for the development of this Park, and meanwhile the Department has placed the area under proper police supervision. It is expected that the work of improvement will be undertaken some time during the ensuing year.

#### CITY PARK, CITY HALL AND CARROLL PARK, WITH SMALL PARKS AND FOUNTAINS.

All of the above Parks have had the necessary care and maintenance, including the removal of dead limbs and trees, the care of walks, lawns and flower-beds.

#### GREENHOUSES AND PROPAGATING HOUSES.

Four new additional Propagating Houses and Greenhouses are being built to correspond with those built last year, in addition to which the present Palm House is to be extended and raised higher to the square to meet the requirements of tropical plants and trees.

## SHELTER HOUSE AND CAFÉ AT FLOWER GARDEN.

The Café and Restaurant at the Flower Garden has been altered and improved in accommodation and convenience, and the internal arrangements changed so as to provide accommodations for the driving public. It has been provided also with hot water apparatus for heating purposes, and arrangements made for the comfort of ladies and gentlemen.

Commodious sheds have been built in the yard for the driving and equestrian public. These improvements now completed, supply a long-felt want in the community.

## MECHANICAL DEPARTMENT.

The Mechanical Department consists of carpenters, masons, painters, plumbers, wheelwrights and blacksmiths, who attend to all the repairs of buildings, fences, gutters, basins, drains and water supplies, as well as keep in proper order the whole of the rolling stock, consisting of steam and horse rollers, water-barrels, trucks, wagons, carts, etc., etc. Also the painting of all wood and iron work, including sign-painting and lettering, with the cleaning and painting of iron railings of City Parks. All the rustic work in the Park is done by this Department.

## BEAR CAGE.

The bear pits and iron cage provided for the use of the bears presented to the Park were constructed by this Department.

## RUSTIC ARBORS, ETC.

There have been entirely rebuilt in Prospect Park the following rustic arbors: One long arbor, above old Flower Garden, near Children's Playground; one long

arbor on walk leading from Boat House and Flower Garden towards new bridge on side of Lake; two large arbors, for picnics, on side of the walk leading to Farm House from long meadow, besides other repairs.

The whole of the rustic work was in a dilapidated condition, with all the foundations rotten. Preparations are being made to rebuild anew the remainder of the arbors, together with the rustic benches, as they are all past repairing.

These arbors have all been rebuilt in all their material parts of locust wood, and will prove more durable than those previously erected.

#### WATER SUPPLY.

In our last report it was stated:

“In the general work of repairing and improving Prospect Park, the Commission have given considerable attention to the necessity for an increased water supply, and to that end have invited experts to examine the grounds and submit practicable plans whereby the supply may be increased to at least five million of gallons per day. There is a great necessity for more water, in order that the lakes may be purified, thereby making the Park healthful as well as beautiful.

“From experiments made during the last Fall, while obtaining the present increase of an extra million of gallons per day, it was ascertained that at a distance of forty feet below the level of the present well there was a strata of coarse gravel containing pure water, seven and a half degrees colder than the water in the present well, and this water seems to be in a practically unlimited quantity. Those who have made the experiments are so satisfied with the results that they are willing to enter into a contract

with the Department, and agree that unless the full supply of five millions per day is secured, they will waive any and all compensation.

“In order to avail ourselves of this water, it will be necessary to increase our pumping facilities by obtaining new engines and pumps; the present engine and pump have not sufficient capacity to deliver the water at present supplied by the well without being driven beyond their estimated duty.

“The cost of obtaining an additional supply from this water-bearing strata will be less than from any other source in this vicinity, the one million extra gallons having been obtained at a cost of about two thousand, seven hundred and fifty dollars. The cost of obtaining this water is a mere nominal amount, the only real cost being the new engine and pump.

“This extra amount of water distributed through the Park and in the lakes would undoubtedly be the best means of purifying the stagnant waters now therein, and render them healthful resorts.”

Application was made to the Board of Estimate for \$50,000 for the increased water supply, pumping stations, pumps, engines, boilers, etc., and disallowed.

It is a source of great regret that the Commission failed in getting the necessary money, as the pump and engine and boiler are nearly worn out, and necessitate a large expenditure of money every year for repairs, and are liable to give out any day by reason of their dilapidated condition, and the Park be without any water, either for drinking fountains or lakes.

The new drinking fountains in the Park, the new toilet rooms in the Shelters, and the increased use of the water for sprinkling the roads, takes nearly all the water that can be pumped up by the present system, leaving a very small supply for the Lake.

Further, the present system could be used simply to supply the drinking water and the water used in the fountains, and the new plant could be used for furnishing the water to the lake, and in supplying this water a new beauty might be added to the Park by throwing the same in the lake as a great fountain, or in a small cataract from the sides of Lookout Hill, either of which would be exceedingly attractive, and at the same time furnish the much needed water.

The Commission will make another application to the Board of Estimate for this much-needed improvement, and hope to be successful.

#### OCEAN PARKWAY.

The Commission are examining into the merits of various kinds of gravel that have been offered for use on the Ocean Boulevard. There is very little good or durable gravel in our vicinity, and with the great amount of wear upon our Boulevard it requires continual repair. An appropriation was obtained last year, sufficient to resurface nearly all of the Ocean Boulevard from the Manhattan Beach Crossing to the Concourse at the ocean, and during the next year the greater part of the Boulevard will be resurfaced. The resurfacing of that portion of the Boulevard between Manhattan Beach Railroad crossing and the exit to the Park has given universal satisfaction, the only difficulty being, as heretofore stated, that the gravel which the Commission are obliged to purchase wears out in a very short time, leaving soft spots in many places, and which requires constant attention and repair to keep in good condition. We hope to be able to obtain some gravel suitable for driving upon, and at the same time prove more durable and at reasonable prices. Experiments in this line will be made during the coming season, and we

cordially invite the assistance of experts who use these Boulevards to aid us in our efforts to improve them, as they are becoming more and more popular, and at the same time bring to our city a large class of people who make desirable citizens and add enough to the taxable wealth to sustain these drives and boulevards.

Very respectfully yours,

GEORGE V. BROWER,

*President.*

A NOOK AND SHELTER ON THE LAKE.
